

EQUAZIONI GONOMETRICHE
ELEMENTARI

$$\textcircled{1} \quad 2 \cos^2 x - \cos x = 0$$

$$\textcircled{2} \quad \sin x \cos x + \sin x = 0$$

$$\textcircled{3} \quad \cos(\pi - x) + \cos^2 x = 0$$

$$\textcircled{4} \quad \operatorname{tg}^2 x - 3 = 0$$

$$\textcircled{5} \quad \sqrt{2 \sin^2 x} = \frac{3}{2}$$

$$\textcircled{6} \quad \operatorname{tg}^2 4x - \operatorname{tg} 4x = 0$$

$$\textcircled{7} \quad 3 \sin x \cdot \frac{1}{\cos} \operatorname{tg}^2 x + 5 \sin x = 7$$
